The specification also describes a chicken C-II protein (ANYOIS20) which has cell calcification inhibiting activity and a cell calcification inhibiting activity and a cell calcification inhibiting agent containing c-erg protein. The proteins are used for measuring the calcification of a cell, for diagnosing arthritis deformans or ossification of spinal column ligament.

The invention relates to an Erg (a member of the Ets family of C transcription factors) modulator for use in medicine, where the modulator cis is not tumour necrosis factor alpha (INF-alpha) or interleukin-1 (II-1). CA also included are a method of screening for a drug or drug candidate, cinvolving determining whether or not a group being screened modulates can be used in volving determining whether or not a group being screened modulates. CC involving determining whether or not a group being screened modulates. CC considering member), intracellular adhesion molecule-2 (ICAM-2) and/or von Willebrand Factor (VWF) RNA or polypeptide expression, or convolving the control of one or more regulatory sequences of the SPAC, CC TSP, rho A, ICAM-2 and/or vWF genes, determining whether or not a group being screened modulates the expression of Erg or of Erg RNA in a given convolving screened modulates the expression of Erg or not a group being screened modulates the expression of Erg or of Erg RNA in a given convolved, including of Erg to a nucleic acid comprising an Erg binding site, determining whether or not a nucleic acid hybridises with DNA of an Erg gene or its transcription product or determining whether or not a group being screened in the diagnosis of a disorder such as a disorder in colleic acid knocks out or reduces expression of Erg. Erg based to probes can be used in the diagnosis of a disorder such as a disorder in colleic acid knocks out or reduces expression of Erg. Erg based to a storder that can be treated by tissue remodeling, cancer, cancer compression, on the collect acid sorder, developmental collect acid sorder, in the preparation of a medicament for treating a collect agent is useful in the preparation of space, TSP, rho A, ICAM-2 or vWF. A group that modulates the effect of Erg or a therapeutically active agent is useful for the preparation of a medicament for treating calcius acid sequence of human Erg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; Erg; transcription factor; tumour necrosis factor-alpha; TNF-alpha; interleukin-1 (IL-1); SPARC; thrombospondin; TSP; rho-A; intracellular adhesion molecule-2; ICAM-2; von Willebrand Factor; vangiogenesis; inflammatory disorder; developmental disorder; wound; menstrual disorder; cancer; rheumatoid arthritis; atherosclerosis;

The clone BM025 was identified and sequenced. It represents the entire coding region together with 5'- and 3'-UTRS of the Hum:Fli-1 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for etermining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                 Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizoph epilepsy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          measuring human gene expression in a sample derived from human heart (see ABA21355-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system expression are disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single

                                                                                                                                                                                                                                                                                                                                                     probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Penn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel single exon nucleic acid probes (see AII00010-AAII0067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, stagling, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast diseases, proliferative
                                                                                                                                                                                                                                                                                                                            chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histlocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              breast disease and non-carcinoma tumours.

                                                                                                                                                                                                   밁
                                                                                              Ş
                                                                                                                                                                                                                                                                                              Incleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                  Matches
                                                                                                                                                                Query Match
                                                                                                                                                                                                                            probe of the invention.

Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 27; SEQ ID NO 14038;

                                  the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disor associated with GPCRs. The present sequence encodes a non-endogenous control of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1447
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a chicken C-11 protein which has cell calcification inhibiting activity. The specification also describes a cell calcification inhibiting agent containing c-erg protein (AAY01521). The proteins are used for measuring the calcification of a (CAAY01521) for diagnosing arthritis deformans or ossification of spinal column
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 deformans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      measuring

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SS
                                     oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired alivays, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, CC carcinomas, and cancers which may metastasise to the lungs, including CC breast and prostate cancer. The reduction of the adenosine content of CC the ONs reduces side effects. The A-containing ONs break down with the CC release of deoxyadenosine which activates adenosine receptors causing CC concloconstriction and inflammation. AAA32313 to AAA35312 represent the CC nucleotide sequences given in the sequence listing from the present CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last CC 185 sequences are also called SEQ ID NO:1 to 2815, and then the previously named sequences. SEQ ID NO:11 to 1680 CC (AAA32323 to AAA3392) are specifically claimed ONs from the present CC invention. N.B. Sequences given in the disclosure of the present CC invention do not match up with their corresponding SEQ ID NO:: sequences given in the sequences sequences is the present CC invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

```

0

The sequence is that of the human muscarinic acetylcholine receptor gene fragment. The gene is used to exemplify a new expression vector for producing heterologous polypeptides in

halobacterial

to find treatment for Alzheimer's and dementia, have single nucleotide variations at one or more of five polymorphic sites {\tt -}
Claim 1; Fig 1; 52pp; English.
```

The sequence represents the Human gene encoding the ml muscarinic acetylcholine receptor, CHMR1. CHMR1 is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, mAChR, that play important roles in higher brain function such as learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are useful for diagnosing and developing treatments for diseases associated useful for diagnosing and developing treatments for diseases associate with the abnormal expression of the gene or activity of the protein, Alzheimer's disease and dementia with Lewy bodies.

Note: The present sequence also represents haplotype 6, as detailed in table 4 (page 31) of the specification. 663 C; 571 G; 408 T; 0 other; e.g.

                                                                                                                                                                                                                                                                                                                                                                                                        acetylcholine receptor, CHMR1, haplotype 1. CHMR1 is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, mAChR, that play important roles in higher brain function such as learning and memory. The protein is a possible drug target for treatment for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and adveloping treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g Alzheimer's disease and dementia with Lewy bodies.

Note: The present sequence is not shown in the specification but is derived from the CHMR1 sequence given in AASO2501 and information contained in table 4 (page 31) of the specification.

CHMR1 is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, maChR, that play important roles in higher brain function such as learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are useful for diagnosing and devileng treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g. Alzheimer's disease and dementia with Lewy bodies.

                                                                                                                                                                                                                                                                                            useful for diagnosing and developing treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g. Alzheimer's disease and dementia with Lewy bodies.

Note: The present sequence is not shown in the specification but is derived from the CHMR1 sequence given in AASO2501 and information contained in table 4 (page 31) of the specification.
                                                                                                                                                                                                                                                                                                                                                                      acetylcholine receptor, CHMR1, haplotype 3. CHMR1 is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, mAChR, that play important roles in the protein function such as learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are

                                                                                                                                                                                                 learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are useful for diagnosing and developing treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g. Alzheimer's disease and dementia with Lewy bodies. Note: The present sequence is not shown in the specification but is derived from the CHMR1 sequence given in AASO2501 and information contained in table 4 (page 31) of the specification.

                                                                                                                   useful for diagnosing and developing treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g. Alzheimer's disease and dementia with Lewy bodies.

Note: The present sequence is not shown in the specification but is derived from the CHMR1 sequence given in AASO2501 and information contained in table 4 (page 31) of the specification.
                                                                                                                                                                                           acetylcholine receptor, CHMR1, haplotype 5. CHMR1 is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, mAChR, that play important roles in higher brain function such as learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are not polypeptide.

                   acetylcholine receptor, CHMRI, haplotype 7. CHMRI is one subtype of a family of 5 genetically distinct muscarinic acetylcholine receptors, maChR, that play important roles in higher brain function such as learning and memory. The protein is a possible drug target for treatments for Alzheimer's disease and dementia with Lewy bodies (DLB). The gene, polypeptide, haplotypes and antibodies raised against the protein are useful for disquesting and developing treatments for diseases associated with the abnormal expression of the gene or activity of the protein, e.g. Alzheimer's disease and dementia with Lewy bodies. Note: The present sequence is not shown in the specification but is derived from the CHMRI sequence given in AASO2501 and information contained in table 4 (page 31) of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           exon
                                                                                                                                                                               The sequence represents the Human gene encoding the ml muscarinic
                                                                                                                                                                                                                             New variants of the ml muscarinic acetylcholine receptor gene, useful to find treatment for Alzheimer's and dementia, have single nucleotide variations at one or more of five polymorphic sites
